

CLASSROOM NEWSLETTER

March 2025

Highlights

This month, students were very excited to receive our salmon eggs in the classroom. We have been observing them closely and learning about the salmon life cycle, their environment, and how to care for them. This has led to lots of curiosity, thoughtful questions, and meaningful discussions about living things and ecosystems.

We also began our PowerPlay project, which focuses on hands-on learning, teamwork, and problem solving. Students have been engaged in exploring new ideas and working together, and we are looking forward to continuing this project over the coming weeks. Please keep an eye out for when this book comes home, as parts of this project may require some adult support.

Math

In math, we have been reviewing long division, multiplication, patterns and relations, and shape and space, while continuing to build our skills with math word problems.

Literacy

In literacy, students are continuing to develop their informational writing, making connections across subjects.

Reminders

As a reminder, please continue to check in with your child's math homework and reading logs, as regular practice helps support their learning and build confidence.
