

APRIL 2026

# NEWSLETTER

## Personal Wellness & SEL

Students have been active this month with a swimming trip and a class fishing outing. We explored different climates and regions around the world, discussing what these places look and feel like and the living things found there. Students also created creative "Earth glasses" to reflect their learning.

## Science, Music & French

In Science, students have been observing our growing salmon. We also explored the planets through science and music activities. In Music and French, students continue to build their skills through songs and class activities.

## Math & Art

Students have been working on their PowerPlay entrepreneurship projects by surveying classes and collecting data to support their ideas. They used this data to create graphs, connecting to our math learning. We also began exploring geometry. In Art, students completed and painted their clay butterflies.

## Literacy & Social Studies

Students are preparing for upcoming assessments. Grade 5 students are working toward their writing assessment, while Grade 4 students are preparing for their reading assessment. In Social Studies, we explored regions of the world, including climate, vegetation, and animals.
